Making a Simple Hydrogen Generator from Washers - Making a Simple Hydrogen Generator from Washers by Maciej Nowak Projects 13,075,914 views 2 years ago 6 minutes, 29 seconds - Construction of a simple HHO **generator**., made of stainless steel washers and a **water**, bottle.

I used 30mm stainless steel washers to make the generator

I made a 3mm and 4mm hole in each washer

I fixed the washers with M3 threaded rods

On the other side, I electrically insulated the rod with a heat shrink tube

Additionally, I used plastic washers

As a result, the steel washer is electrically connected to only one rod

The next washer was connected to the second rod

Thus, the washers are connected alternately to both rods

The electrolyser is ready. I checked the connections with a multimeter

I used a solid water bottle as a housing

Time to install the electrolyser

The generator will be powered by a 18650 cell, I used a standard housing

I screwed the housing to a piece of aluminum

The whole thing will be mounted with a foam tape and 2 cable ties

I filled the generator with water

Potassium hydroxide (drain cleaner) was used as the electrolyte. It is more efficient than table salt

Time for tests!

HHO is an extremely flammable gas!

The combustion of HHO produces water vapor and a lot of energy
